

Fire Suppression System

Tactical Medical Solutions designed the **Fire Suppression System** to combat the increased use of combustible materials in Improvised Explosive Devices (IEDs).

Our fire blanket is designed to mount either outside or inside the vehicle on the roll bars. In the event of a fire, the handle is pulled and the blanket is released. Once released, the blanket falls free of the container and spreads open. It can then be used to smother personnel and equipment.

The blanket's rating is for a constant operating temperature of 2000° F and has a melt point of 3000° F. With this high of a rating, you can use our system multiple times on the most intense fires. This product gives you the ability to extinguish personnel, vehicles, and equipment with one device.

Fire Suppression System

BVM Adapter

Whether you are serving high-risk warrants on meth labs, taking down a chemical weapons facility or just work in an area with the potential for HAZMAT/CBRNE exposure, you need to be prepared for the worst.

Our **BVM Adapter** will immediately convert a standard BVM into a chemical resuscitation device. Our product eliminates the need for specialized, complicated equipment by using equipment already in your inventory. By using familiar equipment, you minimize training time and increase effectiveness.

Simply remove the reservoir from the back of the BVM attach the adapter and a filter of your choice and the conversion is complete. You now have the ability to deliver life saving respirations to a patient in a contaminated environment.

Adapter with O-two systems adult BVM
