

SOF™ Tactical Tourniquet

Tactical Medical Solutions™ is proud to offer the newest generation of the **SOF™ Tactical Tourniquet**. We have taken the original design and made it even more effective and compact. The windlass has been shortened and anodized. The buckle height has been reduced and the safety screw has been redesigned to lower the profile and allow for easier tightening. These changes have made the tourniquet much more compact than the previous model.

We are also proud to announce that the 2nd generation SOF™ tactical Tourniquet is the standard issue tourniquet to all US Army Special Operations Forces receiving the IFAK (Individual First Aid Kit). It is also included in the tactical medical deployment sets issued to the most skilled Special Operations medics in the world.

Olaes™ Modular Bandage

The Olaes™ Modular Bandage is the newest product from Tactical Medical Solutions Inc. to aid in increasing the effectiveness of modern tactical combat casualty care. No other bandage offers so much versatility in such a small package. Cover minor wounds, apply truly effective pressure dressings, apply occlusive dressings, and have the ability to pack severe wounds with one bandage.

Each Olaes™ Modular Bandage contains the following:

- > Elastic Bandage.
- > Wound Pad.
- > 3 meters of sterile 4 ply gauze.
- > Plastic sheeting to act as an occlusive dressing.
